RaySafe ThinX Intra is intended for measurements on dental intra-oral and dental CBCT machines. The instrument is always on, triggered by radiation. You don’t need any correction tables, since the active compensation feature automatically applies corrections for variation in beam filtration.

**BATTERY REPLACEMENT**
Replace the battery if the yellow LED is blinking, or if the start-up screen shows after X-ray exposure.

1. Remove the battery cover.
2. Replace the battery (CR2450).
3. Put the cover back. The instrument is ready to use.

**CLEANING**
Use a damp cloth for cleaning.

**INSTRUMENT VERSIONS**
This manual is valid for 1302023-A.

Position RaySafe ThinX on a flat surface. Position the collimator of the X-ray machine close to the sensor area.

Expose.

Read the values on the display.

If the detected waveform is pulsed, the number of pulses will automatically be displayed.

DEFINITIONS
Exposure time is measured from start trig until the signal drops below 25% of max (HF/DC), or from the first pulse that has a peak above 25% of max until the last time the signal drops below 25% of max (AC).
All recorded samples are used to calculate dose and HVL.
Dose rate is (dose)/(exposure time).
kVp is calculated from 5 ms after trig until the signal drops below 75% of peak (HF/DC), or from pulses with a peak signal level above 75% of maximum (AC).
LED INDICATION
RaySafe ThinX Intra has three LED:s. Normal state is an idle blink every fourth second.
• Green
Idle blink: The instrument is ready to use.
Intense blink: An exposure has been recorded.
• Yellow
Replace the battery. 100 exposures left.
• Red
Idle blink: Replace the battery. No further measurements are allowed.
Intense blink: An error has occurred. See details on display.
